

# Kedarnath Yatra Workers Survey: Final Questionnaire and Variable List

Version 2, worked example. Read-aloud interview, tablet-based, one visit, 45 minutes at most

**What this is.** The final list of questions and variables for the survey of Yatra workers. The main aim is to measure **vulnerability to poverty** (VEP and multidimensional poverty). A short employment-quality block and a short tasks block are added. The tasks block only gathers the facts the later paper on job transfer needs. There are **220 asked questions**, 8 recorded automatically or by the enumerator, and 128 variables built afterwards in Stata. The companion file `variable_dictionary.csv` lists everything in one table.

## 1. Rules the questions follow

- **No rating questions.** Every answer is a fact: yes or no, a count, an amount, or a choice from a card. Nobody is asked to score anything on a scale.
- **Aggregate household questions**, no household roster. The respondent is the worker. Consumption is for the household's usual place of living.
- **Codes.** 98 = prefers not to say (schooling, ropeway view). 97 = don't know (job-quality questions). Blank = the question was skipped by a rule shown in the table.
- **Recall.** 30 days for frequent spending, 12 months for infrequent spending, health, income and shocks, 15 days for recent illness.
- Questions are read aloud in Hindi, Garhwali or Nepali. Cards are used for long answer lists.

## 2. Time budget

Interview length is NOT estimated here. The module list below gives item counts only; the pretest measures real durations from the tablet's own start and end timestamps.

| Module | Name                                             | Items      | Minutes |
|--------|--------------------------------------------------|------------|---------|
| P      | Cover page, consent and paradata                 | 8          |         |
| A      | Respondent and household                         | 17         |         |
| B      | Work and work history                            | 16         |         |
| C      | Monthly calendar of work and income; remittances | 46         |         |
| D      | Migration                                        | 13         |         |
| E      | Household consumption                            | 29         |         |
| F      | Housing, amenities and assets                    | 28         |         |
| G      | Finance, insurance and schemes                   | 17         |         |
| H      | Health                                           | 9          |         |
| I      | Food security, shocks and coping                 | 12         |         |
| J      | Ropeway                                          | 2          |         |
| K      | Job quality (Apablaza et al. 2026 questions)     | 14         |         |
| L      | Tasks and skills (short block)                   | 17         |         |
|        | <b>Total</b>                                     | <b>228</b> |         |

Interview length is measured from the tablet's own start and end timestamps at the pretest; no estimate is claimed here. With 4 enumerators at 5 to 8 interviews a day, one round of about 10 days gives roughly 200 to 320 interviews.

## 3. Consent script (read before Module A)

*"We are doing a study on the livelihoods of people who work on the Yatra route. It takes about 40 minutes. You can stop at any time and you can skip any question. Nothing you say will be linked to your name. Do you agree to take part?"* Record consent (variable `consent`); stop the interview if the answer is no.

## Module P: Cover page, consent and paradata

| No. | Question or instruction                                                                      | Answers                | Variable, skip rule, source                     |

Write what they say.                                                                                                                                                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <b>training_type_other</b><br><i>Skip: Ask only if <math>training\_type = 9</math> (Other); may be left blank</i><br>Source: STEP module 2                                                                                                                             |

## Module C: Monthly calendar of work and income; remittances

*Read aloud: Now I want to go through the last twelve months, one month at a time. For each month I will ask what work you were mainly doing and where you were living, and then what you usually earned. It is easiest to start with the Yatra months and fill the rest afterwards.*

| No. | Question or instruction                                                                            | Answers                                                                                                                                                                                                    | Variable, skip rule, source                                                                                      |

## Module E: Household consumption

*Read aloud: Now about what your household usually spends in a month. For each thing I will ask twice – once for a normal month during the Yatra season, and once for a normal month when the Yatra is closed – because spending is often quite different in the two. Rough figures are fine.*

| No. | Question or instruction                                                                                                                                                                                                                      | Answers               | Variable, skip rule, source                                                                                                                                                                                                                                |
|-----|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| E1  | Leaving aside money you send home – is what your household spends in a normal month during the Yatra season different from what it spends when the Yatra is closed?                                                                          | 1 Yes, 0 No           | <b>spend_differs_by_season</b><br>Source: Project design (respondent-gated seasonal recall); the underlying two-season design follows Beegle et al. 2012 and Deaton and Grosh 2000 on usual-period recall                                                  |
| E2  | In a normal month during the Yatra season, how much do you (and anyone staying with you here) spend on cereals (rice, wheat, other grains), pulses, sugar and salt, bought or from your own stock? (Rs)                                      | Rupees (whole number) | <b>cons_staples_yatra_pm</b><br>Source: HCES 2022-23, MoSPI Appendix A, Sections 5.1-5.3 (30-day); IHDS-II Income and Social Capital Questionnaire, Q14 14.1-14.6 (30-day, same items)                                                                     |
| E3  | In a normal month when the Yatra is closed, how much does your household spend on cereals (rice, wheat, other grains), pulses, sugar and salt, bought or from your own stock? (Rs)                                                           | Rupees (whole number) | <b>cons_staples_offseason_pm</b><br><i>Skip: Ask only if spend_differs_by_season = 1</i><br>Source: HCES 2022-23, MoSPI Appendix A, Sections 5.1-5.3 (30-day); IHDS-II Income and Social Capital Questionnaire, Q14 14.1-14.6 (30-day, same items)         |
| E4  | In a normal month during the Yatra season, how much do you (and anyone staying with you here) spend on milk and milk products, vegetables, fruit, egg/fish/meat, cooking oil, spices, and tea or coffee, bought or from your own stock? | E24 | In a normal month during the Yatra season, how much do you (and anyone staying with you here) spend on pan, gutka, bidi, cigarettes, tobacco or alcohol? (Rs) | Rupees (whole number) | <code>cons_pan_tobacco_yatra_pm</code><br>Source: HCES 2022-23, MoSPI Appendix A, Sections 12.1-12.3 (7-day in HCES; usual monthly here, and combined into one figure)                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| E25 | In a normal month when the Yatra is closed, how much does your household spend on pan, gutka, bidi, cigarettes, tobacco or alcohol? (Rs)                      | Rupees (whole number) | <code>cons_pan_tobacco_offseason_pm</code><br><i>Skip: Ask only if spend_differs_by_season = 1</i><br>Source: HCES 2022-23, MoSPI Appendix A, Sections 12.1-12.3 (7-day in HCES; usual monthly here, and combined into one figure)                                                                                                                                                                                                                                                                                                                                                                                                                 |
| E26 | In the last 12 months, how much did your household spend on clothes and footwear? (Rs)                                                                        | Rupees (whole number) | <code>cons_clothing_12m</code><br>Source: HCES 2022-23, MoSPI Appendix A, Sections 13.1-13.2 (365-day). IHDS-II Income and Social Capital Questionnaire, Q14 14.38-14.39 (365-day). Nigeria GHS-Panel Wave 3, Household Questionnaire, Sections 10B/11 instead uses a 6-month recall for clothing (items 401-441); we follow the two India sources, since one of them (HCES) underlies our poverty line                                                                                                                                                                                                                                            |
| E27 | In the last 12 months, how much on education: fees, books, uniforms, tuition? (Rs)                                                                            | Rupees (whole number) | <code>cons_education_12m</code><br>Source: HCES 2022-23, MoSPI Appendix A, Section 10.1 (365-day). IHDS-II Income and Social Capital Questionnaire, Q14 14.35-14.37 (365-day, same items). Nigeria GHS-Panel Wave 3, Household Questionnaire, Sections 10B/11 asks school fees inside its education/roster module, per child, not as a household total, so it is not directly comparable                                                                                                                                                                                                                                                           |
| E28 | In the last 12 months, how much did your household pay for any hospital admission or stay? (Rs, 0 if none)                                                    | Rupees (whole number) | <code>cons_medical_hosp_12m</code><br>Source: HCES 2022-23, MoSPI Appendix A, Section 10.2 (365-day, hospitalisation). IHDS-II Income and Social Capital Questionnaire, Q14 14.34 (365-day, in-patient). Nigeria GHS-Panel Wave 3, Household Questionnaire, Sections 10B/11 instead uses one combined 6-month medical item (less detail); we follow the matching HCES/IHDS split                                                                                                                                                                                                                                                                   |
| E29 | In the last 12 months, how much on durable goods: furniture, utensils, cooking appliances, phone, jewellery or ornaments, bicycle or vehicle parts? (Rs)      | Rupees (whole number) | <code>cons_durables_12m</code><br>Source: HCES 2022-23, MoSPI Appendix A, Section 14 (365-day, 10 sub-groups). IHDS-II Income and Social Capital Questionnaire, Q14 14.40-14.48 (365-day). Nigeria GHS-Panel Wave 3, Household Questionnaire, Sections 10B/11 (12-month tier: durables, appliances, building materials). All three agree on the 12-month recall; insurance premiums, which IHDS (14.50) and the Nigeria survey (items 510-513) count here, are excluded, following HCES and standard national-accounts practice (insurance is a financial item, not consumption) – premiums are covered instead by the insurance items in Module G |

## Module F: Housing, amenities and assets

*Read aloud: Now some questions about your house and the things your household has.*

| No. | Question or instruction                                                                                                       | Answers                                                                                                                                                                    | Variable, skip rule, source                                                                                           |
|-----|-------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------|
| F1  | What is the main material of the floor at your usual home?                                                                    | 1 Mud/kaccha; 2 Cement/mud-cement; 3 Tile/mosaic/marble                                                                                                                    | <code>floor_material</code><br>Source: NITI Aayog National MPI housing indicator                                      |

## Module J: Ropeway

*Read aloud: Now two questions about the ropeway that has been proposed between Gaurikund and Kedarnath.*

| No. | Question or instruction                                                                        | Answers                                              | Variable, skip rule, source                           |
|-----|------------------------------------------------------------------------------------------------|------------------------------------------------------|-------------------------------------------------------|
| J1  | A ropeway is proposed between Gaurikund and Kedarnath. Are you in favour, neutral, or against? | 1 Support; 2 Neutral; 3 Oppose; 98 Prefer not to say | <code>ropeway_stance</code><br>Source: Project design |

| No. | Question or instruction                                                                                       | Answers     | Variable, skip rule, source                                                                            |
|-----|---------------------------------------------------------------------------------------------------------------|-------------|--------------------------------------------------------------------------------------------------------|
| J2  | Is your main Yatra work carrying, transporting or guiding people or goods on the Gaurikund to Kedarnath trek? | 1 Yes, 0 No | <b>trek_dependent</b><br>Source: Project design (see tasks_module W4: exposure must be asked directly) |

## Module K: Job quality (Apablaza et al. 2026 questions)

*Read aloud: Now a set of questions about the conditions of your work – hours, pay, contract and so on. These come from a standard list used in many countries, so one or two may not fit your situation. Say so and we will move on.*

| No. | Question or instruction                                                                                                                                                                                                                                                                                                                                                                                         | Answers                                                                                                                                                                                                                                                                                                                                                   | Variable, skip rule, source                                                                                                                                                                                                               |

## 4. Variables built afterwards (not asked)

All of these are computed in Stata (`do/02.build.final.dataset.do`) from the asked answers, so the analysis starts from raw answers and every step can be checked.

| Variable                             | Meaning                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | How it is made                                                                                                                      |
|--------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------|
| <code>education_years</code>         | The direct year count ( <code>years.schooling</code> ) when the respondent knew it; otherwise the midpoint of the fallback bracket ( <code>education_level_cat</code> : 0/2/7/11 for no-formal/some-primary/primary-complete/secondary-plus); missing if the respondent preferred not to say.                                                                                                                                                                                                                                                                                                                      | <code>years.schooling</code> if <code>knows_years_schooling==1</code> , else bracket midpoint from <code>education_level_cat</code> |
| <code>hoh_female</code>              | Derived from the gendered relationship categories: husband/father/son/brother/other-male imply a male head, wife/mother/daughter/sister/other-female a female head, and when the respondent IS the head it is their own sex. Replaces a separate male/female question.                                                                                                                                                                                                                                                                                                                                             | from <code>hoh_relation</code> ; <code>= female</code> if <code>hoh_relation==1</code>                                              |
| <code>months_here</code>             | Count of calendar months with loc code 1. This is the measured length of the respondent's own season, replacing a constant season length applied to everyone, and it is what the mid-month Yatra-start problem resolves to: each respondent's boundary is wherever their own row turns over.                                                                                                                                                                                                                                                                                                                       | <code>count of loc_m1-loc_m12 == 1</code>                                                                                           |
| <code>months_home_base</code>        | Count of calendar months with loc code 2.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <code>count of loc_m1-loc_m12 == 2</code>                                                                                           |
| <code>months_third_place</code>      | Count of calendar months with loc code 3 – off-season labour migration, measured rather than stated. The stated counterpart is <code>worked_away_in_closure</code> in Module D; the two should agree, and where they do not that is a data-quality flag neither could raise alone.                                                                                                                                                                                                                                                                                                                                 | <code>count of loc_m1-loc_m12 == 3</code>                                                                                           |
| <code>closure_labour_migrant</code>  | 1 if the respondent either reported working away during the closure ( <code>worked_away_in_closure</code> ) or has at least one calendar month coded 'somewhere else, for work'. This is type B in the closure-regime typology and the mobility variable that actually carries information in this population, in place of a migrant dummy built on district boundaries – which the pilot shows would classify 11 of 20 seasonal movers as non-movers.                                                                                                                                                             | <code>worked_away_in_closure==1</code> — <code>months_third_place&lt;0</code>                                                       |
| <code>stays_all_year</code>          | 1 if <code>closure_base = 1</code> . The case the two-season design of this instrument does NOT fit: for these respondents the Yatra-season and off-season consumption questions describe the same place, and the pair should be checked for a suspiciously high identical-answer rate at the pilot.                                                                                                                                                                                                                                                                                                               | <code>closure_base==1</code>                                                                                                        |
| <code>split_household</code>         | 1 if <code>closure_base</code> is 3 or 4 – the household lives at the home place all year while the respondent is here for the season. This is the case Module E's Yatra-season wording ('you and anyone staying with you here') was written for, and until this item existed there was no way to tell which respondents it applied to.                                                                                                                                                                                                                                                                            | <code>inlist(closure_base,3,4)</code>                                                                                               |
| <code>credit_institutional</code>    | 1 if the household borrowed in the last 12 months from a bank, cooperative, RRB, microfinance institution or SHG ( <code>credit_source</code> 1-4); 0 otherwise, INCLUDING households that did not borrow at all. Defined for every respondent on purpose: <code>credit_source</code> itself is now gated behind <code>took_loan_12m</code> , so using it directly as a VEP covariate would drop every non-borrower from the regression.                                                                                                                                                                           | <code>took_loan_12m==1</code> & <code>in-range(credit_source,1,4)</code>                                                            |
| <code>credit_informal</code>         | 1 if the household borrowed from a moneylender, relative, friend, employer or contractor ( <code>credit_source</code> 5-8); 0 otherwise, including non-borrowers. Separated from institutional credit because the two have opposite signs for vulnerability.                                                                                                                                                                                                                                                                                                                                                       | <code>took_loan_12m==1</code> & <code>in-range(credit_source,5,8)</code>                                                            |
| <code>migrant</code>                 | 1 if origin is not Local (same district).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <code>origin != 1</code>                                                                                                            |
| <code>health_access_tier</code>      | Remoteness of the interview site along the route, derived from the interview GPS rather than from an enumerator-coded cluster: the route runs from the road-head and its hospital up to the shrine, so position along it is what determines how reachable care is. Latitude bands (research team's route crosswalk): below 30.58 Good, 30.58 to 30.66 Moderate, 30.66 and above Poor. Bands, not coordinates, enter the analysis, so the exported data still carries no named site.                                                                                                                                | from <code>gps.lat</code> : 3 if <code>!&gt;30.58</code> ; 2 if <code>30.58-30.66</code> ; 1 if <code>!&gt;30.66</code>             |
| <code>health_access_deprived</code>  | 1 if the site tier is Poor, or Moderate and nobody in the household has health cover. <code>health_insurance_covered</code> was REMOVED: it asked whether "your household" is covered, which for a split migrant household – the worker here, the family elsewhere – does not name a group the respondent can answer for. <code>n_health_insured</code> , a count of covered members, replaces it and is strictly more informative. This variable is also no longer part of the MPI: the health dimension now uses NITI's own mortality and maternal indicators, so this is kept only as a VEP exposure covariate. | <code>tier==1</code> — ( <code>tier==2</code> & <code>n_health_insured==0</code> )                                                  |
| <code>yatra_months</code>            | Count of calendar months with status 1 (Yatra work).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <code>count of status_m1-status_m12 == 1</code>                                                                                     |

Outward remittances are not subtracted.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | yatra_income + non_yatra_income + remit-<br>tance_inward_annual                                                                                                                                 |
| yatra_income_share        | Yatra income divided by total annual income (an Exposure covariate in the VEP model).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | yatra_income / total_annual_income                                                                                                                                                              |
| income_seasonality_cv     | Calendar path: coefficient of variation across the twelve reported monthly earnings (n-1 divisor). Fallback path: the same CV computed on a two-level series – income_pm_yatra_eq in each Yatra month, income_pm_other_eq in each other month – so the variable is never missing and no respondent silently drops out of the FGLS for want of it. IMPORTANT: the fallback series has no within-season variation by construction, so its CV captures only the between-season swing and is a LOWER BOUND on true seasonality. Always run the VEP arms with income_from_fallback interacted or split; do not treat the two paths as the same measurement. | calendar: rowstd(income_m1..12)/rowmean(income_m1..12)<br>fallback: CV of the two-level series built from<br>income_pm_yatra_eq and income_pm_other_eq<br>over yatra_months and 12-yatra_months |
| cons_staples_pm           | Staples spending, weighted by the length of the Yatra season and the rest of the year.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | (yatra_months*cons_staples_yatra_pm + (12-<br>yatra_months)*cons_staples_offseason_pm)/12                                                                                                       |

| cons_pc_ae_pm           | Household consumption divided by (adults + 0.5 x children under 15), where adults = household size minus children under 15. One simple scale; the choice of scale is a sensitivity check.                                                                                                                                                                                                                                                          | total_cons_pm / (hhsz - n_children_u15 + 0.5*n_children_u15)                                                        |
| poverty_line            | Sethu, Surya and Ruthu (2024) construct TWO lines for 2022-23 by the Rangarajan method: Rs 2,515 per capita per month rural and Rs 3,639 urban. Which applies is decided by home_rural_urban – the respondent's USUAL place of residence, not the Yatra worksite. Until this variable existed the build applied the rural line to everyone, which measured urban-resident workers against a line 31 percent too low and understated their poverty. | 2515 if home_rural_urban==1, else 3639                                                                              |
| poor                    | 1 if per-capita monthly consumption is below the rural or urban line that applies to this respondent.                                                                                                                                                                                                                                                                                                                                              | cons_pc_pm < poverty_line                                                                                           |
| poor_sensitivity_cpi    | 1 if below the Rangarajan and Dev 2024 CPI-adjusted line; robustness only.                                                                                                                                                                                                                                                                                                                                                                         | cons_pc_pm < 1850                                                                                                   |
| durables_count          | Legacy six-item count kept only so earlier outputs stay reproducible. DO NOT use for the MPI: the asset indicator is mpi_asset_deprived, which applies NITI's actual rule to its actual eight-item list.                                                                                                                                                                                                                                           | owns_tv + owns_radio + owns_bicycle + owns_motorcycle + owns_car + owns_fridge                                      |
| productive_assets_count | Sum of the six productive-asset binaries (livestock, pony/mule, shop/stall, work vehicle, work equipment).                                                                                                                                                                                                                                                                                                                                         | owns_cow_buffalo + owns_goat_sheep + owns_pony_mule + owns_shop_stall + owns_work_vehicle + owns_work_equipment     |
| water_deprived          | NITI rule, BOTH limbs: deprived if the source is unimproved (codes 7-9), OR the source is improved but the round trip to fetch it takes over 30 minutes. The second limb could not be evaluated at all before water_on_premises and water_fetch_minutes existed.                                                                                                                                                                                   | inrange(drinking_water,7,9) — (water_on_premises==0 & water_fetch_minutes>30)                                       |
| cooking_fuel_deprived   | NITI rule: deprived if the household cooks with firewood, dung, crop residue/shrubs, charcoal or coal (codes 6-10). Kerosene (5) is NOT counted, because NITI's own list does not name it; the global MPI does count it, so this is a documented departure and the raw fuel code is retained so either rule can be applied later.                                                                                                                  | inlist(cooking_fuel,6,7,8,9,10)                                                                                     |
| mpi_asset_count         | Radio, TV, telephone, computer, animal cart, bicycle, motorbike, refrigerator – NITI's own list. Car or truck is NOT in this count; it is a separate limb of the indicator.                                                                                                                                                                                                                                                                        | owns_radio + owns_tv + owns_phone + owns_computer + owns_animal_cart + owns_bicycle + owns_motorcycle + owns_fridge |

| shock_covariate         | 1 if any of: natural disaster, road or bridge blocked, Yatra stopped or disrupted, sharp fall in customers or prices (codes 3, 5, 6, 7). These hit the whole route at once, so they are the shocks a ropeway – or a flood year – delivers to everyone simultaneously. Separating them from idiosyncratic shocks is what makes the covariate/idiosyncratic variance decomposition identifiable.                                                     | any of shock_3 shock_5 shock_6 shock_7                                                                              |
| shock_idiosyncratic     | 1 if any of: illness or death of an earning member, crop or livestock loss, loss of business or assets, lost the work (codes 1, 2, 4, 8). These hit one household at a time.                                                                                                                                                                                                                                                                       | any of shock_1 shock_2 shock_4 shock_8                                                                              |
| coped_sold_assets       | 1 if selling or pawning assets was among the responses. Kept as its own variable because the asset-smoothing test compares it directly against cutting consumption, and the two are no longer mutually exclusive.                                                                                                                                                                                                                                  | cope_3                                                                                                              |
| coped_cut_consumption   | 1 if cutting consumption was among the responses. See coped_sold_assets – a household doing BOTH, or cutting consumption precisely in order to avoid selling, is the case the single-answer item could not represent.                                                                                                                                                                                                                              | cope_4                                                                                                              |
| mpi_mortality_dep       | NITI: a child or adolescent under 18 died in the household in the last five years.                                                                                                                                                                                                                                                                                                                                                                 | child_death_5y == 1                                                                                                 |
| mpi_maternal_dep        | NITI: a woman who gave birth in the last five years did not have at least four antenatal visits for the most recent birth, OR was not assisted by trained personnel at that birth. Households with no birth in the window are NOT deprived, per NITI's own treatment.                                                                                                                                                                              | birth_last_5y==1 & (anc_4_visits!=1 — skilled_birth_attendant!=1)                                                   |

| hours_week_annual    | Yatra-season and off-season weekly hours, weighted by how many months of each the calendar records. Averaged over WORKED months only, so idle months do not drag the figure to zero – idleness is measured by months.no_work, and counting it here too would penalise it twice.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | $(\text{yatra\_months} * \text{hours\_week\_yatra} + \text{offseason\_months\_worked} * \text{hours\_week\_offseason}) / (\text{yatra\_months} + \text{offseason\_months\_worked})$                                                 |
| work_income_pm       | (Yatra income + other work income) divided by 12.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | $(\text{yatra\_income} + \text{non\_yatra\_income}) / 12$                                                                                                                                                                           |
| emp_dep_access       | 1 if idle more than 6 months and spent any weeks looking for work, or wants more work while working under 20 hours a week in EITHER season. The under-20 limb previously tested Yatra-season hours only, where this workforce runs 60-90 hours a week, so it could never fire and the indicator collapsed onto its other limb.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | $(\text{months\_no\_work} \geq 6 \ \& \ \text{weeks\_looked\_for\_work} \geq 0) \ \& \ (\text{wants\_more\_work} == 1 \ \& \ (\text{hours\_week\_yatra} \geq 20 \ \text{—} \ \text{hours\_week\_offseason} \geq 20))$               |
| emp_dep_comp         | 1 if average monthly work income is below 67 percent of the sample median (the fallback threshold in Table 3).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | $\text{work\_income\_pm} \leq 0.67 * \text{median}(\text{work\_income\_pm})$                                                                                                                                                        |
| emp_dep_sec          | 1 if a wage worker has no signed contract, or a self-employed worker's business is not registered.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | wage: contract.status != 1; self-employed: workplace.registered == 0                                                                                                                                                                |
| emp_dep_stab         | Apablaza Table 3 sets TWO tenure thresholds – wage workers deprived under 6 months, self-employed under 12 months – where this file previously applied a single under-1-year rule to everyone, which marked wage workers with 6 to 12 months of tenure as deprived when Table 3 would not. Tenure here is counted in Yatra SEASONS, and one season is roughly six months of work, so the two thresholds map cleanly onto under 1 season for wage workers and under 2 for the self-employed. The casual-job limb is an ADDITION to Table 3, whose fallback (temporary/casual) is meant for use only when tenure is unavailable; it is kept because occasional work is a real instability here, but note it covers code 3 only – code 2 (seasonal) would mark almost this entire sample deprived and would measure the season, not the job. | wage (employment.type $\geq$ 3/4): years.in.yatra.work $\geq$ 1; self-employed (1/2): $\geq$ 2; OR job.permanence == 3                                                                                                              |
| emp_dep_cond         | 1 if someone was injured or killed at the workplace in the last 12 months, or the worker has neither work health insurance nor a pension.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | workplace.injury_12m==1 — (work.health.ins==3 & pension.contrib==3)                                                                                                                                                                 |
| emp_dep_count        | Number of the five employment indicators in which the worker is deprived.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | sum of the five emp_dep_ indicators                                                                                                                                                                                                 |

| n_other_act_checked | Count of the boxes ticked in the check-all list. Compared against the respondent's own count (n_other_activities); a mismatch is a data-quality flag, not a silent loss.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | sum of other_act_1..13                                         |
| other_act_mismatch  | 1 if the number of activities ticked does not equal the number the respondent said they had. Expected to be small; if it is not, the item needs rewording before scale-up.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | n_other_act_checked != n_other_activities                      |
| best_alt_occupation | Of the 13 occupations, the one (other than the respondent's own) whose task profile is closest to the respondent's. Worker's own task profile uses codes 1 AND 2 (does it now, or has done it before elsewhere) – prior capability outside the current job is exactly what a transfer question is about. Destination profiles are the occupation-level share of workers doing each task (Gathmann and Schonberg's q-oj).                                                                                                                                                                                                                                                                                                                                                 | argmax over j != own occupation of cosine(worker profile, q-j) |
| task_cover_best     | Coverage: of the tasks that alternative occupation requires, the share this worker can already perform. Ormiston's t <sub>ji</sub> direction – can the worker step in?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | sum(q_best * worker) / sum(q_best)                             |
| task_retain_best    | Retention: of the tasks this worker can perform, the share that alternative occupation would actually use. Ormiston's t <sub>ij</sub> direction – how much of their skill survives the move?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | sum(q_best * worker) / sum(worker)                             |
| skill_move_type     | Direction of the move implied by the coverage/retention pair, both split at 0.5: high-high lateral (move needs little retraining); low coverage but high retention means the destination needs skills the worker lacks while their own still count, i.e. UPSKILLING; high coverage but low retention means the worker has more than the destination uses and much of it goes idle, i.e. DOWNSKILLING; low-low means the skill sets barely overlap, i.e. RESKILLING. Worker's own task profile uses codes 1 AND 2 (does it now, or has done it before elsewhere) – prior capability outside the current job is exactly what a transfer question is about. Destination profiles are the occupation-level share of workers doing each task (Gathmann and Schonberg's q-oj). | from (task_cover_best, task_retain_best), each split at 0.5    |

## 5. Apablaza et al. (2026) questions: what we asked, changed or dropped

Module K uses the questions in Appendix 2 of the paper. Their own skip logic is kept: wage workers only for the contract and leave questions; extra hours only if the worker wants more work; the search question only if some month had no work. The paper asks every household member aged 5 or more. We ask the respondent only (no household roster), so an employment index for the whole household cannot be built.

| Apablaza question                                                             | Our variable                                     | Note                                                                                                                                     |

| Q12 registered workplace                                           | <code>workplace_registered</code>               | Widened to local registrations (union, Yatra registration, trade licence, GST) |
| Q13 hours in a normal week                                         | <code>hours_day_yatra, days_week_yatra</code>   | Two easier questions, multiplied afterwards                                    |
| Q14 monthly earnings                                               | <code>income_m1 to income_m12</code>            | Asked month by month (section 6)                                               |
| Q15 earnings range if unknown                                      | <code>not asked</code>                          | Amounts are asked for every month, so no range is needed                       |
| Q16 pension                                                        | <code>pension_contrib</code>                    | As in the paper                                                                |
| Q17 health insurance through work                                  | <code>work_health_ins</code>                    | As in the paper                                                                |
| Q18 leave rights                                                   | <code>leave_rights</code>                       | Wage workers only                                                              |
| Q19 ever injured; Q20 injury or death at workplace, last 12 months | <code>injured_ever, workplace_injury_12m</code> | The paper's evidence on hazards                                                |
| Q21 wants more work; Q22 how many hours                            | <code>wants_more_work, more_hours_week</code>   | As in the paper                                                                |
| Q23 weeks looking for work                                         | <code>looked_for_work_idle</code>               | Tied to the months with no work in the calendar                                |
| Q24 first job; Q25 why lost the last job                           | <code>not asked</code>                          | Apply to the unemployed only; <code>prev_occ_reason</code> covers job changes  |

The five deprivation indicators (access, compensation, security, stability, working conditions) are built from these raw answers in Stata, using the thresholds in Table 3 of the paper. Where the paper gives a choice, the fallback is used for pay (67 percent of the median) because the international-dollar version needs a conversion factor we have not verified.

## 6. What changed from the earlier draft, and why

- **The 12-month calendar is back.** The worker gives the main activity for each month and the earnings for each month with work. Earnings are asked month by month, so that a single typical figure is not rounded (heaping) and monthly earnings are not guessed from an annual total. Because it is the original design, the constructed income, the months of work and the seasonality measure now reproduce the earlier pipeline exactly. Months with no work are filled with 0 by the tablet, so the calendar costs about 4.5 minutes.
- **Licences and certificates are gone.** People drive, wire and guide without holding a licence, so holding one says little about what they can do. The block asks what people do (the three-answer grid) and adds three factual driving questions, asked only of those who have driven: motorcycle, car, truck or bus, with or without a licence. Entry papers can be studied in the second paper if needed.
- **The consumption module now asks a Yatra-season figure AND an off-season figure for every routine item** (9 pairs: staples, perishables, home-grown/gifted food, eating out, fuel, toiletries, transport/communication, rent, non-hospital medical), instead of one “last 30 days” figure. Workers here are migrants: fieldwork happens during the Yatra season, so a single recent-recall question would describe only the season the interview happens to fall in, not the whole year. The item groupings and which items get a long (365-day) recall instead still follow HCES 2022-23, IHDS-II and the Nigeria GHS-Panel (read directly; see section 8).
- **Remittances are split the same way** (Module C): a usual monthly amount sent and received, for the Yatra season and for the off-season, instead of one annual figure.
- **The annual welfare measure is now a genuine annual average**, not an on-season snapshot: each seasonal item is weighted by the number of Yatra-season months and off-season months from the work calendar, exactly as income already was. In the test data this moves `cons_pc_pm` down and the poverty rate up, because the earlier design implicitly treated on-season spending as if it held all year; see the note in `checks/check_report.txt`.
- **Two new consumption variables for robustness:** a narrow measure (30-day items only, as in Dercon and Krishnan 2000) and a per-adult-equivalent measure (needs the count of children under 15, now asked).
- **Four opinion questions on a 1 to 5 scale were removed**, in line with the no-rating rule. Only the three-way ropeway view remains.
- **Dropped for length:** remittance frequency and `prev_offseason_work`. The season start, end and length, and the main off-season activity, are now built from the calendar instead of being asked.
- **Added:** sex, native language, earners, children under 15 and school-age children, the way the household coped with a shock, direct exposure to the trek, and the Apablaza questions.
- **Food security and disability are new** (Modules H and I): a long-term illness/disability flag and an unmet-healthcare-need question (VASyR 2025 / Washington Group short set), plus the standard WFP reduced Coping

Strategy Index. This was a genuine gap: a vulnerability-to-poverty instrument with no food-security module. Modelled on the VASyR/Lyons, Kass-Hanna and Montoya Castano (2023) multidimensional livelihood index, read directly (see [replication/vasyr\\_example/](#)); a full dietary-diversity count was left out to stay inside the 45-minute limit.

- **The rCSI is a Yatra-season/off-season pair, like the consumption module:** the first version asked each of the five WFP coping items once, over “the last 7 days” – fieldwork happens during the Yatra season, so that could only describe on-site coping at the work site, not the household’s usual pattern (which may look different off-season, with different members present). Each item is now asked as a usual-week day-count for each season, combined into an annual-average rCSI the same way income and consumption already are.
- **Household-head and family-structure items are new** (Module A): relationship to the household head and the head’s sex (auto-filled with the respondent’s own sex when they are the head), and whether the family is nuclear, joint or single-member. `hhsiz` is now asked as household membership directly (“how many members live in your household”) rather than through a shared-kitchen framing.
- **A direct residence-migration question is new** (Module D): apart from the seasonal Yatra-work absence, whether the respondent’s usual place of residence for most of the year differs from their family’s native/home place – distinct from `origin` (where they are originally from) and from the NSS short-term-migrant item (a specific 15-day-to-6-month absence threshold). Asked only of non-local-origin respondents.
- **The interview site is no longer named.** `location_cluster` now has generic labels (Cluster 1-4) instead of the actual place names: enumerators read the site off a printed crosswalk card kept by the research team, not a name on the tablet, so no exported record carries a named interview site. The underlying codes and the health-access-tier logic built from them are unchanged. On the Kobo build (`questionnaire/build_xlsform.py`), the enumerator-name question is dropped the same way – each enumerator has their own Kobo login, which records who submitted automatically – and GPS is captured silently in the background the moment consent is given, with no on-screen question.
- **Tasks block: 12 tasks** (from 27), the ones the provisional destination jobs need most. They fully cover 7 of the 13 destination jobs. The task-transfer paper will need a longer list and employer information.
- **Field team is 4 enumerators** in the worked example (the earlier file used 6).

## 7. Points still open

- **Timing is untested.** The 12-month calendar and the 25-question Apablaza set are the two blocks most likely to run over their estimate. Time them in the pretest.
- **The working-conditions indicator is high in the test data** (67 in 100 deprived). It is driven by the social-protection route: almost nobody has a pension and most have no health insurance through work. That may well be true of Yatra workers, but check it against the pilot before treating it as a finding. The cut-off of 2 of 5 gives 66 in 100 employment-poor; a cut-off of 3 gives 30.
- **Tenure is asked in whole years**, so the paper’s under-6-month test for wage workers is not possible; casual jobs supply the variation instead.
- **Real quotas.** Occupation quotas must be reset against a real enumeration before fieldwork.

## 8. The consumption module, read against the three source questionnaires

Most of the vulnerability-to-poverty papers in the project folder use an existing national survey and report only how consumption was totalled, not the question list itself. So the three questionnaires were read directly: **HCES 2022-23** (MoSPI, Appendix A: the source of our poverty line), **IHDS-II** (the Income and Social Capital Questionnaire, question 14), and the **Nigeria GHS-Panel** (Wave 3 Household Questionnaire, Sections 10B and 11, the survey behind Eze and Iheonu 2025).

### 8.1 What each source does

| Source                   | Recall design                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|--------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| HCES 2022-23 (India)     | A 'modified mixed reference period': 30 days for cereals, pulses, sugar and salt (Sections 5.1-5.3); 7 days for milk, vegetables, fruit, meat/fish/egg, oil, spices and processed food eaten out (Sections 6-7); 30 days for fuel, toiletries, conveyance, phone and rent (Sections 8-11); 365 days for clothing, footwear, education, hospitalisation and durables (Sections 10, 13-14); 30 days for non-hospitalisation medical (Section 10.3). Insurance is not part of consumption. |
| IHDS-II (India)          | A flatter design: 30 days for all 33 food and routine items together (questions 14.1-14.33, including phone, transport and non-hospitalisation medical); 365 days for 19 further items (14.34-14.52: hospitalisation, education, clothing, footwear, durables, and also insurance premiums and vacations, which it counts as consumption).                                                                                                                                              |
| Nigeria GHS-Panel Wave 3 | Four recall tiers: 7 days for food and a short non-food list (tobacco, newspapers, transport); 30 days for fuel, electricity, toiletries, phone/internet, rent; 6 months for clothing, footwear and small household items (shorter than the two India surveys); 12 months for durables, insurance and ceremonies.                                                                                                                                                                       |

## 8.2 Where the three sources agree, and where they do not

- **All three agree on 30 days** for fuel and light, toiletries and household consumables, transport and phone charges, and rent.
- **All three agree on 12 months** for durable goods (furniture, utensils, appliances).
- **HCES and IHDS-II agree exactly** on splitting medical spending into non-hospitalisation (30 days) and hospitalisation (365 days), and on 365 days for clothing, footwear and education. The Nigeria survey instead asks one combined 6-month medical item, and 6 months (not 12) for clothing.
- **HCES and IHDS-II disagree on food.** HCES uses 7 days for perishables (milk, vegetables, fruit, meat, oil, spices) to limit recall decay on frequent purchases; IHDS-II asks the same items at 30 days, in one simpler module. The Nigeria survey uses 7 days for all food.
- **Only IHDS-II and the Nigeria survey treat insurance premiums as consumption.** HCES does not, which matches standard national-accounts practice (insurance is a financial item). We follow HCES: our insurance question sits in Module G, not in the consumption total.
- **HCES and IHDS-II record the source of each food item** (purchased, home-grown, gift) as a column against every single item. That needs far more interview time than we have, so, following Calvo and Dercon (2007) and Eze and Iheonu (2025), home-grown and gifted food is asked as one aggregate question instead.

## 8.3 Our final choice, and why

We follow **HCES 2022-23** for which items get a short recall and which get a 365-day recall (staples, fuel, toiletries, transport, rent and non-hospital medical at a routine recall; clothing, education, hospital and durables at 365 days), because HCES is also the source of our poverty line (Sethu et al. 2024). Within the routine group we do not copy HCES's actual-recall design (its 7-day window for perishables, versus 30 days for staples): our workers are migrants, so the bigger source of error is location and season, not recall decay on one item. Every routine item is instead asked as a usual monthly amount, once for the Yatra season and once for the off-season (section 6), which a single actual-recall question cannot give. Every item in Module E of this questionnaire (section 3) carries its exact source citation.

## 8.4 Other papers in the folder

| Source                                                              | Consumption measure                                                                                                         | Use in our list                                                                                                      |
|---------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------|
| Calvo and Dercon 2007 (Ethiopia)                                    | Total value of food and non-food consumption, from purchases, own harvest and gifts.                                        | Source for asking home-grown and gifted food as one aggregate question.                                              |
| Dercon and Krishnan 2000 (Ethiopia)                                 | Monthly consumption: food plus a deliberately narrow non-food list, to avoid seasonal swings from large expenditures.       | Source of the narrow (30-day only) consumption measure kept as a robustness check.                                   |
| Azeem et al. 2016 (Punjab, MICS)                                    | Quantities of foods consumed and monetary non-food spending, valued at weekly prices.                                       | We ask values, not quantities, to keep the interview short.                                                          |
| Azeem et al. 2018 (Pakistan); Awuni et al. 2023 (Ghana)             | Food intake converted to an adult-equivalent basis (Claro et al. 2010 scale).                                               | Source of the adult-equivalent consumption measure kept as a robustness check; needs the count of children under 15. |
| Lyons et al. 2023 (VASyR, Lebanon)                                  | A short expenditure module (food total, rent, water, income) run at national scale.                                         | Shows a short module of this kind can work in the field.                                                             |
| Khosla and Jena 2022; Jha et al. 2018 (rural India, using IHDS/NSS) | Monthly per capita consumption expenditure; item list not given in the paper (the source survey was read directly instead). | Confirms the outcome variable is per-capita monthly consumption.                                                     |
| Ding 2022; Wei et al. 2023; Ceessay and Morelli 2026                | Income-based, or income and consumption used interchangeably, in small samples.                                             | Not comparable; we keep consumption, not income, as the welfare measure.                                             |

| Source                          | Consumption measure                                                                | Use in our list                                                              |
|---------------------------------|------------------------------------------------------------------------------------|------------------------------------------------------------------------------|
| Zheng and Ma 2023 (China, CLES) | Ten food groups counted over the reference week, for dietary diversity, not value. | Not used; our aim is a value-based poverty line, not a diet-diversity score. |

## 9. Code lists

| List        | Codes                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
